Bonn, 22.04.2008

Dear Mr Przybylak,

with pleasure we herewith certify that the earthquake early warning systems **secty LifePatron TA**, your company installed in the Regional Office of Welthungerhilfe in Kabul, Afghanistan, and in the Trauma Councelling Center in Bagh, Pakistan, are working since installation in November 2005 without any problem and without false alarms.

The system gave no alarm with microseism (minor earthquakes) in the region, this is system-technically also desired as we know. Although we are very much appreciate the system staying calm in case of microseism whithout danger of physical destruction, we are very much looking forward to your new software update whereby also microseism could be visualized in the display. This option strengthens the confidence in the system even more.

Yours sincerely

Theo Riedke
Head of Regional Desk
Central Asia
