

Dear Mr. Przybylak,

Your company installed the “secty lifePatron®” earthquake warning system in December 2009 and it works reliably and without false alarms.

The goal of installing your system was to alert employees in the event of a strong earthquake and not to alert employees in the event of smaller intensities so that employees do not PANIC.

For this purpose, two earthquake detectors (1 master, 2 submaster) and 3 standard sirens were installed in the building.

On the recommendation of secty electronics GmbH, the sensitivity of the threshold value was set to 01 of the sensor according to the building.

We have now had a few smaller earthquakes where the system did not alert. This gave our employees confidence in the system and didn't panic.

We would like to congratulate you on this innovative and very helpful development of the earthquake warning system and wish secty electronics GmbH continued success.

Best regards

Lima, 11 October of 2023
